

ABSTRACT

The present invention refers to a process for preparing a compound of general formula (A), as reported in the description, wherein R is a radical of naproxen or bromonaproxen and R_1 - R_{12} are hydrogen or alkyl groups, m, n, o, q, r and s are each independently an integer from 0 to 6, and p is 0 or 1, and X is O, S, SO, SO₂, NR₁₃ or PR₁₃ or an aryl, heteroaryl group, said process comprising
10 reacting a compound of formula (B)

wherein R is as defined above and Z is hydrogen or a cation selected from: Li⁺, Na⁺, K⁺, Ca⁺⁺, Mg⁺⁺, tetralkylammonium, tetralkylphosphonium, with a compound of formula (C), as
15 reported in the description, wherein R_1 - R_{12} and m, n, o, p, q, r, s are as defined above and Y is a suitable leaving group.
